Amendments to the Claims:

Claims 1, 3, 4, 5 and 14 have been amended herein. Please note that all claims currently pending and under consideration in the referenced application are shown below. Please enter these claims as amended. This listing of claims will replace all prior versions and listings of claims in the application

Listing of Claims:

- (Currently Amended) A chemical mechanical polishing (CMP) apparatus comprising:
 a substantially continuous polishing pad having a polishing surface and an opposing surface; and a deformable pad attached to the polishing pad, the deformable pad comprising a plurality of laterally isolated, deformable solid supports attached to the opposing surface of the polishing pad, wherein the plurality of solid supports are is devoid of entrapped cells of gas or liquid.
- 2. (Original) The CMP apparatus of claim 1, further comprising a substrate carrier, a polishing table, a first mechanical drive assembly for placing the polishing table in motion, and a second mechanical drive assembly for placing the substrate carrier in motion.
- 3. (Curently Amended) The CMP apparatus of claim 1, wherein the deformable pad further comprises a ventral layer attached to the <u>a</u> bottom surface of each of the plurality of solid supports.
- 4. (Currently Amended) The CMP apparatus of claim 3, further comprising a dorsal layer attached to the a top surface of each of the plurality of solid supports.

- 5. (Currently Amended) The CMP apparatus of claim 1, wherein the deformable pad further comprises a dorsal layer attached to the <u>a</u>top surface of each of the plurality of solid supports.
- 6. (Original) The CMP apparatus of claim 1, further comprising at least one of a ventral layer and a dorsal layer integrally formed with the plurality of solid supports.
- 7. (Original) The CMP apparatus of claim 1, wherein the plurality of solid supports comprises a first plurality of solid supports having a first shape and a second plurality of solid supports having a second shape.
- 8. (Original) The CMP apparatus of claim 1, wherein the plurality of solid supports comprises a first plurality of solid supports having a first size and a second plurality of solid supports having a second size.
- 9. (Original) The CMP apparatus of claim 1, wherein the plurality of solid supports comprises one or more elastically deformable materials.
- 10. (Original) The CMP apparatus of claim 9, wherein at least one solid support of the plurality of solid supports comprises one or more materials of varying density.
- 11. (Original) The CMP apparatus of claim 9, wherein at least one solid support of the plurality of solid supports comprises a plurality of materials, each material of the plurality of materials having a different elasticity.
- 12. (Original) The CMP apparatus of claim 1, wherein at least one solid support of the plurality of solid supports has a cross-section that varies in size in a direction normal to the polishing pad.

- 13. (Original) The CMP apparatus of claim 1, wherein the plurality of solid supports are laterally spaced from each other at varying distances.
- 14. (Currently Amended) A method for chemical mechanical polishing (CMP) comprising:
- providing a CMP apparatus selected from a group consisting of a linear polishing apparatus and a polishing apparatus having a rotatable polishing table;
- providing a deformable pad comprising a plurality of laterally isolated, <u>deformable</u> solid supports, wherein the plurality of solid supports are is devoid of entrapped cells of gas or liquid;
- providing attaching a surface of a substantially continuous polishing pad attached to the plurality of solid supports of the deformable pad;

providing a semiconductor substrate having a surface to be polished; and contacting the surface to be polished with a polishing surface of the polishing pad opposite the surface to which the solid supports of the deformable pad are attached.

- 15. (Previously Presented) The method of claim 14, wherein providing the deformable pad comprising a plurality of solid supports comprises providing a deformable pad comprising a plurality of solid supports attached to a ventral layer.
- 16. (Previously Presented) The method of claim 15, wherein providing the deformable pad comprising a plurality of solid supports attached to the ventral layer comprises providing a deformable pad including a plurality of solid supports attached to ventral and dorsal layers.
- 17. (Previously Presented) The method of claim 14, wherein providing the deformable pad comprising a plurality of solid supports comprises providing a deformable pad comprising a plurality of solid supports attached to a dorsal layer.

- 18. (Original) The method of claim 14, further comprising: integrally forming the plurality of solid supports with at least one of a ventral layer and a dorsal layer.
- 19. (Original) The method of claim 14, further comprising: forming the plurality of solid supports with a first plurality of solid supports having a first shape and a second plurality of solid supports having a second shape.
- 20. (Original) The method of claim 14, further comprising: forming the plurality of solid supports with a first plurality of solid supports having a first size and a second plurality of solid supports having a second size.
- 21. (Original) The method of claim 14, further comprising: forming the plurality of solid supports with one or more elastically deformable materials.
- 22. (Original) The method of claim 21, further comprising: forming at least one solid support of the plurality of solid supports with one or more materials of varying density.
- 23. (Original) The method of claim 21, further comprising: forming at least one solid support of the plurality of solid supports with a plurality of materials, each material of the plurality of materials having a different elasticity.
- 24. (Original) The method of claim 14, further comprising: forming at least one solid support of the plurality of solid supports with a cross-section that varies in size in a direction normal to the polishing pad.
- 25. (Original) The method of claim 14, further comprising: laterally spacing the plurality of solid supports from each other at varying distances.

- 26. (New) A chemical mechanical polishing (CMP) apparatus comprising: a polishing pad having a polishing surface;
- a deformable pad attached to the polishing pad, the deformable pad comprising a plurality of laterally isolated solid supports, wherein the plurality of solid supports is devoid of entrapped cells of gas or liquid; and
- a dorsal layer attached to a top surface of each of the plurality of solid supports.
- 27. (New) A chemical mechanical polishing (CMP) apparatus comprising: a polishing pad having a polishing surface; and
- a deformable pad attached to the polishing pad, the deformable pad comprising a plurality of laterally isolated solid supports, wherein the plurality of solid supports is devoid of entrapped cells of gas or liquid and comprises a first plurality of solid supports having a first shape and a second plurality of solid supports having a second shape.
- 28. (New) A chemical mechanical polishing (CMP) apparatus comprising: a polishing pad having a polishing surface; and
- a deformable pad attached to the polishing pad, the deformable pad comprising a plurality of laterally isolated solid supports, wherein the plurality of solid supports is devoid of entrapped cells of gas or liquid and comprises a first plurality of solid supports having a first size and a second plurality of solid supports having a second size.
- 29. (New) A chemical mechanical polishing (CMP) apparatus comprising: a polishing pad having a polishing surface; and
- a deformable pad attached to the polishing pad, the deformable pad comprising a plurality of laterally isolated solid supports, wherein the plurality of solid supports is devoid of entrapped cells of gas or liquid and comprises one or more elastically deformable materials and at least one solid support of the plurality of solid supports comprises one or more materials of varying density.

- 30. (New) A chemical mechanical polishing (CMP) apparatus comprising: a polishing pad having a polishing surface; and
- a deformable pad attached to the polishing pad, the deformable pad comprising a plurality of laterally isolated solid supports, wherein the plurality of solid supports is devoid of entrapped cells of gas or liquid and comprises one or more elastically deformable materials and at least one solid support of the plurality of solid supports comprises a plurality of materials, each material of the plurality of materials having a different elasticity.
- 31. (New) A chemical mechanical polishing (CMP) apparatus comprising: a polishing pad having a polishing surface;
- a deformable pad attached to the polishing pad, the deformable pad comprising a plurality of laterally isolated solid supports, wherein the plurality of solid supports is devoid of entrapped cells of gas or liquid and at least one solid support of the plurality of solid supports has a cross-section that varies in size in a direction normal to the polishing pad.
- 32. (New) A chemical mechanical polishing (CMP) apparatus comprising: a polishing pad having a polishing surface;
- a deformable pad attached to the polishing pad, the deformable pad comprising a plurality of laterally isolated solid supports, wherein the plurality of solid supports is devoid of entrapped cells of gas or liquid and the plurality of solid supports are laterally spaced from each other at varying distances.
